Probing in web surveys & response burden: first results from an international web survey

CSDI London, 24 - 26 March 2011
Dorothée Behr, Wolfgang Bandilla, Lars Kaczmarek, Michael Braun, and Sandra Majer

GESIS – Leibniz Institute for the Social Sciences, Mannheim
Overview

- Overall project goal
- Main study January 2011
- Focus on response burden
  - Response times
  - Breakoff
- Outlook
Overall project goal

- *Project funded by the German Research Foundation’s Priority Programme on ‘Survey Methodology’.*
- Development of a method to use cognitive interviewing methods, in particular category-selection probing, in Web surveys. (*supplemental, not replacement method*)
- Investigation of the adequacy of using Web surveys with respondents recruited from online access panels.
- Testing of the approach with substantive survey topics, focusing on detection of interpretation differences in international surveys.
Main Study 1: January 2011

- Participating countries: Canada (English-speaking), Germany (eastern + western as separate regions), Denmark, Hungary, Spain, US.
- Target population defined as country citizens aged btw. 18-65.
- Respondents drawn from online access panel Respondi & international partners.
- Quotas set according to gender, education, age, east/west.
- Targeted completes per country/region 480, but in total 10% increase to compensate for lurkers (*no further costs incurred*).
- n = 3,695 completed interviews.
... and the questionnaire

- Languages: Danish, English, German, Hungarian, Spanish.
- Items to a great part drawn from the ISSP.
- Introduction, screening questions (4 (5*) items).
- Randomization of thematic blocks on:
  - Family (gender roles, child raising, …) (8 items)
  - Politics (rights of people in a democracy, political interest, immigrants…) (13 items)
- Demographic variables (10 items), assessment of survey (1 item).

+ 1 open-ended question for further comments

4 of these items probed with category selection probing

3 of these items probed with comprehension/specific probing & 1 split comprehension vs. category selection

* Only for Germany to assign respondents to eastern or western Germany.
Probing question with respondent’s answer

Repetition of closed item, i.e. context provision

Category selection probe ...

Please explain why you selected “agree”.
The statement was: Being a housewife is just as fulfilling as working for pay.

If you have any questions or problems, please contact: Dorothée Behr - email: webstudien@gesis.org
Comprehension probe ...

We have just asked you to place yourself on a scale from left to right. Now please tell us what ideas you associate with the term "left".

[Text box for meaning of "left"]

And what ideas do you associate with the term "right"?

[Text box for meaning of "right"]
Response burden

- Open-ended questions …
  - Costs for respondents: they require more time and higher effort than closed-ended questions (= increased response burden).
  - Consequently, they lead to increased breakoff and item nonresponse (e.g., Galesic, 2006; Holland & Christian, 2009).
  - At the same time, interest plays an important role when it comes to answering open-ended questions (Holland & Christian, 2009).
### Response times overall*

<table>
<thead>
<tr>
<th>Country</th>
<th>Mean</th>
<th>Mini - Max</th>

Example from the politics block: Civil disobedience

How important is it that citizens may engage in acts of civil disobedience when they oppose government actions? Not at all important (1) …. very important (7) Can’t choose

**Probe category selection:** Please explain why you selected "#v_217|code#". […]

**OR**

**Probe comprehension:** What ideas do you associate with the phrase "civil disobedience"? Please give examples. […]

Politics block: mean response time in seconds for civil disobedience probes (x-axis) across countries (y-axis)

Blue → comprehension probe, red → category selection probe.
Breakoff according to question types & sequence

- Overall breakoff: 11.4% (474 of 4169), thereof:
  - 55.3% at probes (262 of 474)
    - 82.4% (216 of 262) of probe breakoffs occur during the first half of the survey (i.e., during first thematic block no matter whether family or politics).
  - 39.0% at closed items (185 of 474)
  - 5.7% at introductory texts (27 of 474)

To investigate: What differences exist between countries? (culture-specific saliency such as with right-left probe in US or CA...)

</table>

*NOTE:* 9 further breakoffs from Germany not defined as DE-eastern/western since breakoff occurred before screening item on region.
Outlook

- Currently undertaken: Coding of answers to the civil disobedience probe
- Examples …
Thank you!
Any questions or comments?
References

Examples for category selection probing

• “I don't believe civil disobedience accomplishes anything”
  – No benefit from civil disobedience

• “It is a concrete way to express dissatisfaction with decisions being made, as long as the "civil" is maintained and violent methods are not used.“
  – Exemplifies how to carry out civil disobedience
• “we are a society of laws! we have procedures in place to air our grievances and they should be used before we break the law.”
  – Different means to get the attention of the government

• “sometimes, is the only way to have attention from the authorities”
  – Only way to get attention

• “Sometimes it gets out of hand and people and property gets destroyed. I believe in peaceful demonstration.“
  – Negative outcomes
Examples for comprehension probing:

- "riots, damaging strikes, illegal activities"
  - Focus on violence and violent actions

- Going on strike, not following orders—but in a decent fashion, contacting the government offices through phone calls, letters, faxes
  - Implicit peaceful means
• “Civil disobedience can take many forms from quiet forms of protest which is preferred, but it can also take the form of violent disobedience which is an unfortunate form of protest because people lose sight of the reason for their objections to the government's actions.“
  – Range of actions or meanings of the term
Satisfaction with survey
(1 very poor
– 5 very good)

means:
DK: 3.75
HU: 3.96
CA: 3.93
DE western: 3.99
US: 4.04
DE eastern: 4.13
ES: 4.16
