

# **The use of paradata in the Eurobarometer Standard Survey Series**

Bill Blyth & Sharon Eagleton  
TNS

# Overview

- Fitness for purpose requires control of all aspects of survey management, including timeliness and cost
- Paper illustrates primary use of paradata to control Eurobarometer timely delivery and data quality
- Describes current system and evolution
- Majority of data is unpublished, and based on real waves

# The Quality Triangle

# Eurobarometer: Geographical coverage

# The Eurobarometer in figures

- **Number of F2F interviews** = approx. 160 000 per year
- **Number of questions asked** = approx. 1 000 per year
- **Number of countries** = up to 34
- **Regional and national languages covered** = 46
- **Number of topics** = 25 per year
- **Processing** = close to 50 000 tables per wave
- **Printouts** = 90 000 A4 pages per wave
- **Reporting** = 30 to 40 reports per year

# Design & process implications

- Consistency, validity, timeliness and cost-effectiveness inexorably result in standardisation and centralisation
- Increased workload and shorter timelines have a similar effect
  - 1973- two waves a year in 6 Countries
  - 2010- eight-ten waves a year in 27+ countries
- Standardisation and centralisation yield improved control of a wide range of error and bias sources
- These in turn identify opportunities for further innovation and improvement

# EB centralisation and standardisation

2005

2011

# Paradata sourcing

- Centralisation enables standardisation
- Centralisation drives provision, consistency, timeliness
- Centralisation enables calibration and benchmarking
- Centralisation results in utilisation
- Centralisation results in improvement-timeliness, data quality error reduction, cost, 'Fitness'

# Timeliness and error reduction: top line wave reports

- Report example- talk/walk through
- Single wave
- Across waves

# Report Examples

## Timeliness and error reduction

**Scores**  
Scores have been calculated applying the principle 1 day = 1 point  
Tasks completed in advance vs. official plan generate positive scores.  
tasks completed with delay generate negative scores.  
Always positive scores  
The score is the results of the sum of the figures in lines:  
9+13+15+20+24+25 and on in 65: 1+3+4+2+4+5

Region	

#### Recommended Actions

Investigate interviewer sample profiles and time of day to make improvements

Investigate interviewer sample profiles and time of day to make improvements

#### CONTACT REPORT INFORMATION

Number of interviewers 104 (target 63-125 (each interviewer to do 1 or 2 assignments))

Number of sampling point 250 (target 250 (125 appts x 2 clusters))

Number of interviews per interviewer 0% (interviewers carrying out 0 interviews)

#### Recommended Actions

Assignments ideally are 1 weekday after 14:00 and 1 weekend day

Exceptions are made for appointments

BEFORE 14:00 weekday visits 1304 27%

AFTER 14:00 weekday visits 2584 53%

WEEKEND visits 925 19%

#### Recommended Actions

Response Rate by interviewer 7 7% interviewers have 100% response rate

Flagged if >25%

#### Recommended Actions

Interviewers carrying out 0 interviews

No follow-up required

# Summary

- Management system and paradata must reflect the user priorities
- Timeliness is key - reduce the risk of not delivering on time
- Reduce errors – get reports accurate first time
- Believable trends & data credibility are the quality focus
- Responsive design to respond to this
- Comparative studies benefit from standardisation and centralisation
- Reduce process errors..... costs will follow
