

Differential Response Styles of Subjective Life Expectancy and Cultural Differences in Time Orientation

Sunghee Lee
Mingnan Liu
Mengyao Hu

University of Michigan

Expectation Questions

- Solicit respondents to estimate probabilities of future events on a numeric scale of 0-100
 - Product purchase
 - Inflation
 - Asset value
- Popular among economists backed by empirical evidence
- Debate over probabilistic reasoning in psychology

Subjective Life Expectancy – 1

- Subjective life expectancy (SLE)
“What is the percent chance that you will live to be [TARGET AGE] or more?”
- Predicts mortality and mortality-related economic and health behaviors (e.g., Social Security benefits claim)
- Used in surveys of older adults

Subjective Life Expectancy – 2

- Cognitive difficulties beyond probabilistic reasoning
- SLE assumes
 1. Future time orientation
 2. Pragmatic future outlook

- Directly against cultural sensitivity
 1. Past, present, and future orientation
 2. Fatalism, idealism and pragmatism

Subjective Life Expectancy – 3

- Time orientation: Past, present, and future
 - Pragmatism: Fatalism, idealism and pragmatism
-
- Differential difficulties and Item nonresponse
 - Differential future outlooks and deterministic responses (0 or 100)

Data

- Health and Retirement Study (HRS), 2004-2010
- English Longitudinal Study of Ageing (ELSA), Wave 1
- Survey of Health, Ageing and Retirement in Europe (SHARE), Wave 1
- China Health and Retirement Longitudinal Study (CHARLS), 2011

Analysis

- Focus on SLE item nonresponse
 - Mostly “don’t know”s
- HRS: Racial/ethnic/linguistic subgroups
- ELSA: Racial subgroup
- SHARE:
 - Germanic vs. Romance language speaking countries
 - Israel by ethnic/linguistic subgroups
- CHARLS

Results – 3. Time Orientation and SLE NR

Effect on SLE Item NR	HRS Odds Ratio
Personality Traits	
Present Orientation (1~6)	1.11 *
Future Optimism (1~6)	1.02
Religiosity (1~6)	0.98
Control over health (1~6)	0.98
Race, Ethnicity, and Language	
Black vs. White	3.69 ***
Hispanic, English vs. White	1.59
Hispanic, Spanish vs. White	5.57 ***
Control Variables	
Age (Years)	1.07 ***
Male vs. Female	0.58 ***
High school vs. <High school	0.48 ***
Some college+ vs. High school	0.40 ***
Negative vs. Positive health	1.10

Results – 3. Time Orientation and SLE NR

Effect on SLE Item NR	SHARE		
	Germanic Language Countries	Romance Language Countries	Israel
	Odds Ratio	Odds Ratio	Odds Ratio
Personality Traits			
Future Optimism (1~4)	0.74***	0.88*	0.82**
Religiosity (1~4)	1.16***	0.99	1.16***

Results – 4. Mortality and SLE NR

6-Year Mortality Rates by SLE Item Nonresponse, HRS 2004, 2010

Implications

- Expectation question item nonresponse differs
 - Spanish-speaking Hispanics in US
 - Romance language speaking countries in Europe
 - Israel
 - China
- Time orientation matters for SLE item nonresponse
- SLE item nonresponse itself predicts higher mortality risks → Nonignorable missing
